Customer Journey Map

Map out the customer's experience stage-by-stage, capturing their actions, touchpoints, thoughts, and feelings, along with process ownership and improvement opportunities at each stage.

Phase of Journey	Stage 1	Stage 2	Stage 3
Actions <i>What does the customer do?</i>	Searches online for "loan eligibility check," lands on the Smart Lender homepage, reads through the introduction.	Opens the prediction form, enters personal and financial details like income, education, and loan amount.	Submits the form, waits for the prediction, reviews the approval/rejection result.
Touchpoint <i>What part of the service do they interact with?</i>	Homepage / landing page introduction.	Loan eligibility input form on the Flask web app.	Prediction result display page.
Customer Thought <i>What is the customer thinking?</i>	Is this site trustworthy? Will it actually give me a useful answer?	Am I filling these fields correctly? Will my income and credit history be enough	Does this prediction reflect my real chances, or is it just a rough guess?

Customer Feeling <i>What is the customer feeling?</i>	Curious but slightly skeptical	A bit anxious, hoping the form isn't too long or confusing.	Relief or disappointment, depending on the outcome — but appreciative of getting an instant answer.
---	--------------------------------	---	---

Process Ownership <i>Who is in the lead on this?</i>	Frontend/UI team (homepage design and messaging).	Web development team (Flask form, input validation).	Machine learning team (model accuracy and result generation).
Opportunities <i>How can we improve this stage?</i>	Add a short explainer or trust signal (e.g., "How this works") so users feel confident before starting.	Add inline guidance or tooltips for fields like "credit history" or "co-applicant income" so users don't guess.	Show a confidence score or key reasons behind the prediction, not just a plain Yes/No, so the result feels more transparent.
